

Established in 2022 by a group of professionals trying to find answers to our COVID-19 vaccine caused health problems. **COVERSE** is a peak body representing many thousands of vaccine-injured Australians.

VISION – Through our efforts, our collective struggles and suffering can be overcome through good science, pro-active medical care, inclusive public policy, and honourable political discourse.

Science

- Collaborate with scientists and medical services to improve practitioner and patient knowledge of symptoms, conditions, diagnostic tools, and clinical treatment options.
- Encourage and facilitate research processes for the benefit of the community.

Education

- Highlight major systemic inadequacies in the reporting, testing, management, research and treatment of vaccine injuries.
- Raise awareness of the importance of reporting adverse events, and highlight the need for there to be a Government agency tasked with taking a proactive role in studying the longevity and severity of adverse events.

Community

- Provide COVID-19 vaccine injured people with a national platform that helps them find local and international resources and support services.
- Profile the community of COVID-19 vaccine injured people in Australia to better understand the diversity of challenges being faced.

Advocacy

- Lobby for national recognition and community awareness of the science and patient experience of under-acknowledged, and serious injuries from COVID-19 vaccines (including Post-COVID-19 Vaccination Syndrome).
- Advocate for critical and meaningful assistance for COVID-19 vaccine injured, including support for undertaking tests and treatments as well as accessible financial support.
