Subject: Long Covid and no of Vaccines received correlation
Date: Thursday, 16 February 2023 9:07:03 AM

Hi There,

I believe you are holding an inquiry into all things “Long Covid”

My 89 year old Mother who has been incredibly well for her age. (Still lives at home, mows lawn is very with it)

She has received 3 cover vaccinations and after her 3rd she said she felt a big change and didn't feel well.

Very shortly aft she was diagnosed with aggressive cancer(Thyroid type 3, in the lungs. plura and lymph nodes) so in multiple organs and areas

She hasn't been sick with covid

My Son Has had 2 vaccinations and has not been A1 since. He was a super healthy, very clean living, Sporty kid who never got sick.

He's been to hospital with acute testicle pain and has had constant colds, coughs and other symptoms despite us doing everything to boost his immune system.

He is a singer and now has to take many daily supplements to be able to function. High Quality Vit C, D, Zinc, Echinacea, Quercetin, etc etc.

My Step daughter ended up in hospital after her vaccine with a huge cyst of her ovaries that needed removing. She now has ongoing menstrual abnormalities and quite probably won't be able to have kids.

Something is desperately wrong here

the only people I know who seem to be in, or back to great health after covid are **unvaccinated.**

I also know many people who had terrible reactions to there vaccine including Heart attack, Stroke, and other debilitating conditions.

The correlation between number of vaccines and long covid symptoms needs to be thoroughly investigated. Seems to be the obvious answer and as these treatments are still only on emergency use authorisation they have not gone through the normal long periods of thorough testing before we were all mandated to take them.

Its a monumental task trying to get back to some sort of normal for everyone but I'm now very concerned that the vaccines are the problem or a big part of it.

Many people I talk to have similar experiences and I suspect the reporting of these is way lower than what we see on the TGA Govt Site
